

Motasem Kassasbeh

Data Scientist

Professional Summary

High-achieving fourth-year Data Science student (GPA 3.75) at the Jordan University of Science and Technology.

Possessing strong foundational knowledge and project experience in core AI domains, including Machine Learning, Deep Learning, NLP, LLMs, CREW AI, and RAG Systems. Highly proficient in Python for model implementation, with competencies in Data Engineering, Databases, and Big Data concepts. Eager to transition academic learning into professional, data-driven contributions.

Education

Bachelor (B.Sc.) in Data Science at Jordan University of Science and Technology, Irbid, Jordan

October 2022 - June 2026

Grade: 3.75

Named to the Dean's List twice

Projects

Low-Resource Fine-Tuning of a TinyLLM for Instruction Following • [↗](#)

Fine-tuned TinyLlama-1.1B-Chat on a 1K subset of databricks-dolly-15k using 4-bit quantization. Trained on Google Colab with HuggingFace Trainer to improve instruction-following.

Arabic Aspect-Based Sentiment Analysis (ABSA) using ModernBERT • [↗](#)

Applying ModernBERT for Aspect-Based Sentiment Analysis (ABSA) on Arabic food delivery reviews. The project includes aspect term detection, category classification, and sentiment polarity tasks using custom annotated data and transformer-based models.

Career-Hub • [↗](#)

Collaborated on an AI-powered platform connecting early-career talent with curated opportunities. The system features a Crew AI Multi-Agent System for automated content curation and uses n8n for robust workflow automation (daily job emails). It includes a user-facing web application and integrates LLMs to power the Career Chat Assistant for personalized resume and interview guidance.
